

CMS Structure Specification

A reusable content architecture for services, industries, case studies, resources, global components, and future expansion.

Core principle: templates should be reusable because the content is structured - not because pages are manually duplicated.

1. Purpose

This document defines which content types, fields, relationships, taxonomies, and global settings should exist in the CMS.

The CMS must allow Framkant Nordic to publish new services, industries, case studies, and resources without rebuilding layouts or editing code.

2. Recommended Content Model

Content Type	Purpose	Template
Pages	Home, About, Contact, Services overview, Industries overview	Page-specific templates
Services	Individual service pages	Reusable Service template
Industries	Industry landing pages for SEO and ads	Reusable Industry template
Case Studies	Client results and proof	Reusable Case Study template
Resources	Guides and SEO content	Reusable Article template
FAQs	Reusable questions and answers	Shared component or linked records
Testimonials	Reusable client quotes	Shared component or linked records
Team / Authors	Article authors and future team profiles	Reusable profile records

3. Global CMS Rules

The CMS should separate content from layout.

Required rules:

- Editors should change text, images, links, visibility, and ordering without changing design.
- Core layout, spacing, typography, and component styling must remain controlled by the template.
- Repeating content should use repeatable fields or reusable content blocks.
- Related content should be selected through relationships, not pasted manually as links.
- Required fields should be validated before publishing.
- Every content type should support draft, preview, scheduled publishing, revision history, and author permissions.

4. Global Site Settings

Create one global settings area for content used across the website.

Fields should include:

- Company name
- Logo variants
- Primary phone number
- Primary email
- Registered business name
- Organization number
- Address
- Business hours
- Social media URLs
- Default CTA label and URL
- Default form ID
- Default booking calendar URL
- Footer brand statement
- Copyright text
- Default Open Graph image
- Analytics and tracking IDs where appropriate

Global information should never be manually repeated across pages.

5. Reusable Global Components

The following components should be available as controlled reusable blocks:

- Section heading
- CTA block
- Short contact form
- Service card
- Industry card
- Case study card
- Testimonial
- FAQ accordion
- Statistics block
- Timeline
- Growth system diagram
- Related content grid
- Image gallery
- Logo row

Editors may choose approved components, but should not create arbitrary layouts that break consistency.

6. Industry Content Type

Field	Type / Behaviour
Industry name	Required text; used as CMS title
URL slug	Auto-generated; editable
Navigation label	Optional shorter label
Hero eyebrow	Optional short text
Hero headline	Required text
Hero copy	Required rich text with length guidance
Hero image	Required media with mobile crop / focal point
Primary CTA	Label + URL or form action
Secondary CTA	Optional label + URL
Business types	Repeatable items or linked taxonomy
Common challenges	Repeatable challenge cards
Solutions	Repeatable solution cards
Growth system copy	Optional industry-specific intro
Featured case study	Relationship to Case Study
Why Framkant Nordic cards	Reusable defaults with optional override
FAQs	Relationship to reusable FAQ records
Related services	Relationship to Service records
Final CTA headline	Editable text
Final CTA copy	Editable text
Final CTA form / link	Select approved form or URL
SEO title	Editable
Meta description	Editable
Canonical override	Optional
Open Graph image	Optional; fallback to hero
Indexing status	Index / noindex
Publication status	Draft / scheduled / published

7. Service Content Type

Field	Type / Behaviour
Service name	Required text
URL slug	Auto-generated; editable
Service category	Optional taxonomy
Icon	Select from approved icon library
Hero headline	Required
Hero value proposition	Required short text
Hero copy	Required rich text
Hero visual	Image, mockup, or approved visual type
Primary CTA	Label + action
Problem heading	Editable
Problems	Repeatable items
Solution heading	Editable
Solutions	Repeatable items
What's included	Repeatable feature cards
Growth system position	Select which system step to highlight
Featured case study	Relationship to Case Study
Why Framkant Nordic	Default reusable block with optional override
FAQs	Relationship to FAQ records
Related services	Relationship to Service records
Final CTA	Headline, copy, action
SEO fields	Title, description, canonical, OG image, robots

8. Case Study Content Type

Field	Type / Behaviour
Client name	Required
URL slug	Auto-generated; editable
Industry	Relationship / taxonomy
Location	Optional
Client logo	Optional media
Hero headline	Outcome-focused
Hero summary	Short text
Hero image	Required media
Primary proof point	Optional highlighted metric
Client overview	Structured fields
Challenge	Rich text
Diagnosis and strategy	Rich text
Solution blocks	Repeatable categorized sections
Implementation timeline	Repeatable steps
Results	Repeatable metric / outcome cards
Testimonial	Relationship to Testimonial or inline structured fields
Gallery	Repeatable media with captions
Services used	Relationship to Services
Related case studies	Automatic with manual override
Featured status	Yes / no
Archive card summary	Short text
Archive card outcomes	Up to three
SEO fields	Title, description, canonical, OG image, robots

9. Resource / Article Content Type

Field	Type / Behaviour
Article title	Required
URL slug	Auto-generated; editable
Excerpt	Required short summary
Featured image	Required
Category	Required taxonomy
Tags	Optional controlled taxonomy
Author	Relationship to Author record
Published date	Automatic / editable
Modified date	Automatic
Reading time	Automatic calculation
Introduction	Structured text
Table of contents	Automatic from headings
Article body	Approved rich content blocks
Callout boxes	Reusable optional blocks
Related services	Relationship to Services
Related industries	Relationship to Industries
Related articles	Automatic with manual override
Article CTA	Default global CTA with optional override
SEO title	Editable
Meta description	Editable
Canonical override	Optional
Open Graph image	Optional
Schema type	Article / HowTo where valid
Indexing status	Index / noindex

10. Shared FAQ Content Type

FAQ records should be reusable and selectable across service, industry, contact, and resource pages.

Recommended fields: question, answer, category, applicable services, applicable industries, display order, active status, and schema eligibility.

11. Shared Testimonial Content Type

Recommended fields: quote, client name, role, company, portrait, company logo, industry, related case study, source, approval status, and featured status.

12. Taxonomies and Relationships

Use controlled taxonomies for Industries, Service Categories, Resource Categories, and Tags. Services, industries, case studies, and resources should be linked through relationship fields so related content can be generated automatically.

Avoid creating multiple near-identical category names. Taxonomy creation should be restricted to authorized editors.

13. Archive and Ordering Controls

Editors should be able to mark content as featured, control display order where strategically necessary, hide content without deleting it, and manually override automatically related content.

14. Media Management

Every image should support alt text, caption, focal point, copyright / source information, and mobile crop where needed. The CMS should generate responsive image sizes and modern formats automatically.

15. Editorial Guardrails

Use field descriptions, character guidance, required-field validation, and controlled options. Editors should not be able to change brand colors, typography, spacing, card radius, or component CSS from normal page editing.

16. Permissions

Recommended roles: Administrator, Developer, SEO / Content Manager, Editor, and Contributor. Only administrators and developers should change global templates, tracking, plugins, or technical settings.

17. Preview and Publishing Workflow

All content types should support draft previews across desktop and mobile, scheduled publication, revisions, rollback, and unpublished states. Changes to global components

should be previewable before they affect the live website.

18. Migration and Future Scalability

The content model should be platform-independent where possible. Data should remain exportable. New industries and services must be added as records using existing templates, not as custom one-off pages.

19. Version One Scope

For the first release, build structured content types for Services, Industries, Case Studies, Resources, FAQs, Testimonials, and Global Settings. Do not introduce an unrestricted visual page builder for these core templates.

20. Acceptance Criteria

- A new service can be created without duplicating or editing template code.
- A new industry can be created using structured fields and linked content.
- Case studies automatically populate the archive and related-content sections.
- Resources automatically populate categories, related articles, and sitemaps.
- Global contact and company information is managed in one place.
- Editors cannot accidentally alter the design system.
- SEO fields are available on every indexable content type.
- All relationships can be updated without hardcoded links.
- Draft, preview, revision, and scheduling workflows function correctly.
- The CMS remains usable for non-technical editors.
