

Case Studies Archive & Individual Case Study Templates

Two separate, reusable structures: one for browsing all case studies and one for presenting each client story in depth.

Core principle: the archive helps visitors discover proof; the individual case study explains the proof.

Part A - Case Studies Archive

The archive page is the central hub for all client results. It should not feel like a visual portfolio. Its role is to help visitors quickly find relevant proof by industry, service, or business challenge.

1. Hero

Headline: Real Businesses. Measurable Progress.

Supporting text: Explore how Framkant Nordic helps businesses improve visibility, customer follow-up, digital systems, and long-term growth.

Primary CTA: Book a Free Growth Analysis

Secondary CTA: Explore Featured Case

2. Filter and Search

Add simple filters above the case grid.

Industry filters: All, Beauty, Cleaning, Future Industries.

Service filters: Web Design, Local SEO, CRM, Automation, Ads, Reviews, Analytics.

The first version should use simple pill-style filters. Do not add complex multi-filter logic unless enough case studies exist to justify it.

3. Featured Case

Show one prominent featured case immediately below the filters.

Include:

- Client image or website mockup
- Client name and industry
- Short challenge statement
- 2-4 highlighted outcomes
- Services used
- CTA: Read Full Case Study

Desktop layout: large two-column block. Mobile: stacked.

4. Case Study Grid

Display all remaining cases in a consistent grid.

Desktop: three columns.

Tablet: two columns.

Mobile: one column.

Each card should include:

- Cover image
- Client name
- Industry label
- One-sentence challenge or result
- 1-3 key result metrics or practical outcomes
- Services used
- CTA: View Case Study

The entire card should be clickable.

5. Empty and Early-Stage State

At launch, Framkant Nordic may have only a few completed case studies. Do not create empty placeholders or fake results.

If fewer than four cases exist, use one featured case and a simple list layout instead of forcing a large grid. Quality and credibility matter more than volume.

6. Final CTA

Headline: Ready to Become Our Next Case Study?

Supporting text: Let us review your digital presence and identify the most valuable opportunities for growth.

CTA: Book a Free Growth Analysis

Archive Card Fields

Field	CMS Requirement
Client name	Required
Industry	Required taxonomy
Services used	Multi-select taxonomy
Cover image	Required; consistent aspect ratio
Short challenge	Maximum 140 characters
Highlighted outcomes	Up to three
Featured case	Yes/No

Field	CMS Requirement
Display order	Editable
Case study URL	Automatic

Part B - Individual Case Study

Each individual case study should follow the same narrative structure. The goal is to show the client's starting point, the reasoning behind the solution, what was implemented, and what changed.

1. Case Study Hero

Include:

- Client name
- Industry and location
- Short outcome-focused headline
- Brief introduction
- Primary result or strongest proof point
- Hero image, website mockup, or authentic business photography

Avoid vague headlines such as 'A New Website for Client X.' Lead with the business transformation.

2. Client Overview

Use a compact summary block containing:

- Business name
- Industry
- Location
- Company size where relevant
- Project or partnership start date
- Services used
- Website link if appropriate

This section should provide context without becoming a company biography.

3. The Challenge

Explain the situation before Framkant Nordic became involved.

Cover:

- Business problem
- Customer journey weaknesses
- Lost opportunities
- Manual or fragmented processes
- Limitations of the previous digital presence

Focus on commercial consequences, not only technical flaws.

4. Diagnosis and Strategy

Add a short section between Challenge and Solution explaining what Framkant Nordic identified and why certain actions were prioritized.

This is strategically important because it demonstrates thinking, not only execution.

5. The Solution

Explain the connected system that was built.

Organize the work into clear subcategories such as:

- Website and conversion
- Visibility and SEO
- CRM and lead management
- Automation and customer communication
- Reviews and reputation
- Tracking and analytics

Only show areas actually delivered to the client.

6. Implementation Process

Show a short timeline:

Discovery -> Strategy -> Build -> Launch -> Optimization

Include relevant project duration and important milestones. Keep this concise unless the implementation itself is a major part of the story.

7. Results

This should be the strongest visual section.

Prioritize measurable outcomes such as:

- Organic traffic growth
- Leads or bookings
- Conversion improvement
- Google review growth
- Response time improvement
- Reduced manual work
- Revenue or customer growth where verified

Never publish estimated or invented metrics. If hard numbers are unavailable, clearly present verified practical outcomes without pretending they are quantified.

8. Client Testimonial

Use one authentic quote from the client.

Include:

- Full name
- Role
- Business name
- Optional portrait

Do not rewrite the quote so heavily that it loses authenticity.

9. Project Gallery

Show relevant proof, not decorative images.

Possible assets:

- Desktop and mobile website views
- Before and after screenshots
- CRM pipeline
- Automation workflows
- Analytics or search visibility
- Google Business Profile
- Brand or advertising materials

Use captions where context is needed.

10. Services Used

Display linked service cards for every service used in the project. Each card should link to the relevant service page and use the standard service component.

11. Related Case Studies

Show two or three relevant cases based on the same industry, service, or challenge. Avoid random recommendations. This supports internal linking and keeps visitors exploring.

12. Final CTA

Headline: Could We Create Similar Progress for Your Business?

Supporting text: Book a free growth analysis and let us identify where the greatest opportunities exist.

CTA: Book a Free Growth Analysis

Reusable CMS Fields - Individual Case Study

Field	Requirement
Client name	Required
Industry	Required taxonomy
Location	Optional
Hero headline	Outcome-focused
Hero summary	Short paragraph
Hero image	Required
Client overview	Structured fields
Challenge	Rich text
Diagnosis and strategy	Rich text
Solution	Repeatable content blocks
Implementation timeline	Optional repeatable steps
Results	Repeatable metric/outcome cards
Testimonial	Quote, name, role, image
Gallery	Repeatable media items with captions
Services used	Multi-select taxonomy
Related cases	Automatic with manual override
Featured case	Yes/No

Shared Design Rules

Both templates must follow the Framkant Nordic Global Design System: white and light-gray backgrounds, dark typography, Framkant Blue accents, generous whitespace, authentic imagery, subtle borders, minimal shadows, and restrained animation.

Case study pages may use larger images and stronger data sections than standard service pages, but should remain calm and credible.

Responsive Behaviour

Desktop: multi-column archive grid, two-column featured case, and wide visual result sections. Tablet: two-column archive grid. Mobile: one-column cards, vertically stacked hero, horizontally scrollable metric cards only if necessary, and simplified galleries. Essential content must never depend on hover.

SEO and Structured Data

Use clean URLs such as `/case-studies/` and `/case-studies/client-name/`. Each case should include a unique title, meta description, Open Graph image, breadcrumbs, and relevant internal links. The archive should be indexable. Filter states should not create uncontrolled indexable URLs.

Version One Scope

Build one archive template, one individual case template, one reusable card component, one featured-case component, and one results component. Avoid advanced search, animation-heavy galleries, or complex filtering until the number of published cases justifies them.

Acceptance Criteria

- The archive and individual case study are separate templates.
- New cases can be published without redesigning either template.
- Cases can be categorized by industry and services used.
- Only verified results are shown as metrics.
- The archive works with both a small and a large number of cases.
- Every individual case links to relevant services and related cases.
- Both templates are fully responsive and accessible.
- The visual result feels like evidence, not a design portfolio.
