

Contact Page Specification

Purpose

The Contact page is a high-converting landing page whose primary objective is to qualify leads and move them into the Framkant Nordic sales pipeline. Every interaction should feel simple, professional, and frictionless.

Hero Section

Headline: Let's Talk About Your Business Growth. Supporting copy explaining that every inquiry begins with a free growth analysis. Include a primary CTA and a simple contact form.

Contact Form

Required fields: First Name, Last Name, Company Name, Email, Phone Number, Website (optional).

Qualification Questions

Industry, Number of Employees, Current Website (Yes/No), Biggest Challenge (dropdown), Services of Interest (multi-select), Preferred Contact Method, Preferred Meeting Time.

Contact Options

Display email, phone number, and a link to schedule a meeting. Show expected business hours.

Calendar Booking

Embed or link directly to the GoHighLevel booking calendar. Visitors should be able to book immediately after submitting the form or instead of submitting the form.

Response Time

Display a trust message such as: 'We typically respond within one business day.'

After Form Submission

Show a thank-you confirmation with next steps. Explain that the inquiry has been received and the team will review it. Offer the option to immediately schedule a meeting if not already booked.

GoHighLevel Integration

Every submission should automatically create a contact in GoHighLevel, apply the correct tags, assign the lead source, enter the sales pipeline, trigger email and SMS confirmations, notify internal users, and capture UTM parameters.

Confirmation Message

Example: 'Thank you for contacting Framkant Nordic. We've received your inquiry and will review it shortly. If you haven't already booked a meeting, you can schedule one now using the button below.'

Design Guidelines

Two-column desktop layout (content + form), single-column mobile layout. White background, generous spacing, minimal distractions, subtle trust elements and consistent branding.

UX Goals

Visitors should understand what happens next, trust the process, and either submit the form or book a meeting. The page should maximize qualified conversions while integrating seamlessly with GoHighLevel.
