

Services Overview Master Template

A reusable, scalable structure for the main Services hub page. The goal is to make the first version simple to build, easy to maintain, and flexible enough to expand as Framkant Nordic adds new services.

Core principle: one consistent structure, one reusable design system, and no unnecessary complexity in version one.

1. Purpose

This page is the central overview for all Framkant Nordic services. It should help visitors understand the complete offer, identify the most relevant service, and continue to a dedicated service page.

It is not intended to explain every service in full. Each card should communicate enough value to help the visitor choose where to go next.

2. Services Included at Launch

Web Design High-converting websites built as the foundation of the digital growth system.	Local SEO Stronger visibility in Google Search and Google Maps for local customers.	CRM A structured system for leads, conversations, bookings, and customer follow-up.
Marketing Automation Automated communication and follow-up that prevents opportunities from being lost.	AI Chat AI-powered website communication that answers questions and captures leads.	Google Ads Search advertising focused on customers with active purchase intent.
Meta Ads Targeted campaigns designed to create awareness, demand, and qualified inquiries.	Review Management Structured systems for collecting and using customer reviews.	Analytics & Reporting Clear tracking and reporting that connects digital activity to business outcomes.

3. Section 1 - Hero

Headline: Digital Growth Services Built to Work Together.

Supporting text: Framkant Nordic combines strategy, technology, visibility, and automation into one connected growth system. Explore the services that support each part of the customer journey.

Primary CTA: Book a Free Growth Analysis
Secondary CTA: Explore Our Growth System

Use a clean two-column layout. The right side should contain a simple ecosystem visual, not a generic stock image.

4. Section 2 - The Complete Growth System

Before showing individual services, explain that they are not isolated products. Use a simple diagram:

Traffic -> Website -> CRM -> Automation -> Follow-up -> Customer -> Reviews -> Growth

The purpose is to frame every service as part of a larger system. Keep the diagram reusable across the website.

5. Section 3 - Service Card Grid

Display all service cards in one consistent grid. Desktop: three columns. Tablet: two columns. Mobile: one column.

Each card should include:

- Small outline icon
- Service title
- One-sentence value proposition
- Three short outcomes or capabilities
- Text link: Learn More ->

The entire card should be clickable. Card heights should remain visually consistent.

6. Section 4 - Choose the Right Starting Point

Many visitors will not know which service they need. Add a simple decision section with three starting points:

We Need a Stronger Foundation
Recommended: Web Design, CRM, Analytics

We Need More Visibility and Leads

Recommended: Local SEO, Google Ads, Meta Ads

We Need Better Follow-Up and Retention

Recommended: CRM, Marketing Automation, AI Chat, Review Management

This section reduces uncertainty and helps visitors self-select.

7. Section 5 - How the Services Work Together

Use one practical example to show the connected value:

A potential customer finds the business through Google -> visits a high-converting website -> submits a form -> enters the CRM -> receives automated follow-up -> books -> becomes a customer -> receives a review request.

Keep this section visual and concise.

8. Section 6 - Why Framkant Nordic

Use four reusable value cards:

One Partner - No need to coordinate multiple suppliers.

Connected Systems - Every service is designed to support the full customer journey.

Continuous Improvement - The system is measured and improved over time.

Long-Term Responsibility - Framkant Nordic remains involved after launch.

9. Section 7 - Featured Case Study

Show one strong case study that demonstrates several services working together.

Include:

- Client name and industry
- Initial challenge
- Services used
- Measurable or practical result
- CTA: View Case Study

This should prove the system, not simply show design work.

10. Section 8 - FAQ

Use a reusable accordion with service-overview questions:

- Do we need every service?
- Can Framkant Nordic work with our existing website?
- Are services available separately?
- How is the right combination selected?
- How long does implementation take?
- What is included in the Growth Partnership?

Keep the structure reusable and editable in the CMS.

11. Section 9 - Final CTA

Headline: Not Sure Where to Start?

Supporting text: We will review your current digital presence, identify the most important opportunities, and recommend the right starting point.

CTA: Book a Free Growth Analysis

Include the same short form used elsewhere on the website.

12. Reusable Card Specification

Element	Requirement
Icon	Lucide-style outline icon, single accent color
Title	Short service name, maximum two lines
Description	One concise sentence focused on business value
Benefits	Three short points, not a full feature list
CTA	Learn More ->
Interaction	Entire card clickable; subtle hover lift
Consistency	Same padding, radius, border, and minimum height

13. CMS Requirements

The developer should create a reusable service-card component and a single Services Overview page template. Each service card should be editable through structured CMS fields.

Recommended fields: service name, short description, icon, three benefits, service page URL, display order, featured status, and active/inactive status.

Adding a future service should not require redesigning or manually rebuilding the page.

14. Responsive Behaviour

Desktop: three-column service grid and horizontal system diagrams. Tablet: two-column grid. Mobile: one-column grid, vertically stacked content, full-width buttons, and simplified diagrams. Avoid horizontal scrolling and sliders for essential content.

15. Design Rules

Follow the Framkant Nordic Global Design System: white and light-gray backgrounds, dark typography, Framkant Blue as the primary accent, generous whitespace, subtle borders, minimal shadows, 20px card radius, and restrained animation.

16. SEO and Internal Linking

Every service card must link to its dedicated service page. The Services Overview page should link naturally to relevant industries, case studies, and resources. Use a clear URL

such as /services/ and dedicated URLs such as /services/local-seo/.

17. Initial Build Scope

Version one should remain intentionally simple. Build the reusable structure, all nine service cards, one system diagram, one case study block, one FAQ block, and one final CTA. Do not add filters, complex animations, comparison tools, or personalization during the first build.

18. Acceptance Criteria

- All current services are visible and link correctly.
- A new service can be added without code changes to the page layout.
- The page clearly communicates that the services work as one connected system.
- The page works cleanly on desktop, tablet, and mobile.
- The primary CTA is visible near the top and at the end of the page.
- The page does not feel like a generic agency service list.
